

Depending on the access you have been given, you will have a range of new menu items in the left hand menu bar

Edit List Order

This allows you to set up lists for your department, including:

- ◀ Which bolus drugs and infusions will be displayed when your department is selected by the

Manage Users (Where permission has been granted)

When hovering your mouse over the 'Manage Users' menu item, the menu will expand to display an 'Add' and an 'Edit' option. The 'Add' option is shown below. The User Name will default to the part

Note on assigning permissions

- ◁ Permission to create and modify drugs should be limited to a small number of people who

Resuscitation Drugs

Infusion Drugs

Clicking on edit for the 0-20kg, 0-11yr 11 month old:

As per bolus drugs, a given patient with a given weight and age can only have one possible infusion.

- < NEAT, VARY FLOW BY WEIGHT - Neat, but infusion flow rate varies per kg, e.g. run neat propofol @ 10-20 mg/kg/hr.
- < .

therefore important to check the selectable defibrillation energies carefully on the machine itself ,
